Example Book

A demonstration book built with Typst.

Contents

2. Introduction

This book demonstrates how a single Typst project can produce both a complete PDF book and a multi-page HTML website.

2.1. Why use Typst?

Typst allows us to keep the actual content separate from the way that content is exported.

For example, we can write:

- Chapter 1 in one file
- Chapter 2 in another file
- Chapter 3 in another file

and combine all of them into one PDF.

The same files can also be exported as separate HTML pages.

2.2. A small example

Suppose we have the following equation:

$$\text{Revenue} = \text{Price} \times \text{Quantity}$$

This equation will appear in both the PDF and HTML versions.

2.3. Next chapter

The next chapter introduces some basic accounting concepts.

3. Accounting Fundamentals

Accounting is the process of recording, classifying, summarising, analysing, and interpreting financial transactions.

3.1. Accounting equation

The basic accounting equation is:

$$\text{Assets} = \text{Liabilities} + \text{Equity}$$

For example, suppose a business has:

- Assets: ₹100,000
- Liabilities: ₹40,000
- Owner's equity: ₹60,000

Then:

$$100000 = 40000 + 60000$$

3.2. Example

Suppose a business purchases machinery for ₹20,000 in cash.

The transaction affects two assets:

- Machinery increases by ₹20,000.
- Cash decreases by ₹20,000.

Therefore, total assets remain unchanged.

3.3. Going further

The next chapter discusses cost concepts.

4. Introduction to Costing

Cost accounting deals with the recording, classification, analysis, allocation, and control of costs.

4.1. Classification of costs

Costs can be classified in several ways.

4.1.1. By element

- Material
- Labour
- Expenses

4.1.2. By behaviour

- Fixed cost
- Variable cost
- Semi-variable cost

4.2. Example

Consider a factory where fixed costs are ₹100,000 and variable cost is ₹20 per unit.

If the factory produces 5,000 units:

$$\text{Total Cost} = \text{Fixed Cost} + \text{Variable Cost}$$

$$= 100000 + (20 \times 5000)$$

$$= 200000$$

Therefore, the total cost is ₹200,000.
