Syntax

Highlight

This is **important**.

Overline

A line over text.

Raw

Adding rbx to rcx gives the desired result.

What is `fn main()` in Rust would be `int main()` in C.

```
fn main() {  
    println!("Hello World!");  
}
```

This has `backticks` in it (but the spaces are trimmed). And here the leading space is also trimmed.

“This is in quotes.”

„Das ist in Anführungszeichen.“

« C'est entre guillemets. »

This is important.

This is ~~not~~ relevant.

1st try!

Accounting Fundamentals

Accounting is the process of recording, classifying, summarising, analysing, and interpreting financial transactions.

Accounting equation

The basic accounting equation is:

$$\text{Assets} = \text{Liabilities} + \text{Equity}$$

For example, suppose a business has:

- Assets: ₹100,000
- Liabilities: ₹40,000
- Owner's equity: ₹60,000

Then:

$$100000 = 40000 + 60000$$

Example

Suppose a business purchases machinery for ₹20,000 in cash.

The transaction affects two assets:

- Machinery increases by ₹20,000.
- Cash decreases by ₹20,000.

Therefore, total assets remain unchanged.

Going further

The next chapter discusses cost concepts.
